

Instruction to use Lastorq

- Lastorq is an apparatus which blocks the dual tires trucks to stick out of the rocks or hard objects between the two tires.
- Lastorq consists of metal chassis and highly condensed carbon fiber. Its free movement prevents the damage caused to the tire by the trapped rocks.
- Lastorq is detachable in order to fit the area's environment.
- Lastorq blocks mud-bed between dual tires. Therefore, trucks don't lose any performance in hard weather conditions.
